

'Chintan Shivir 2.0 redefining good governance through technology'

STAFF REPORTER ■
RAIPUR

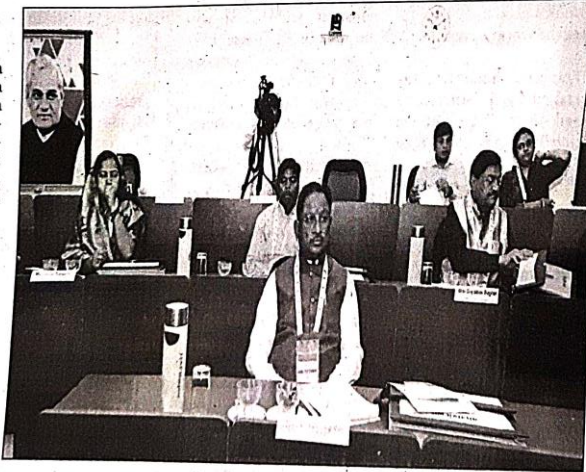

A brainstorming camp, 'Chintan Shivir 2.0', held at the Indian Institute of Management (IIM) in Raipur, is redefining good governance through technology, an official communique said on Monday.

Chief Minister Vishnu Deo Sai, along with his cabinet, took part in the two-day camp.

On the concluding day, a member of the Prime Minister's Economic Advisory Council, Sanjeev Sanyal, delivered a presentation on 'The Art of Good Governance'.

He highlighted key topics like simplifying administrative processes, enhancing state capacities, removing unnecessary regulations, and restructuring government agencies.

Digital health expert Dr Rajendra

Prasad Gupta spoke about delivering quality health services even in remote and backward areas through digital health technologies.

He outlined measures to enhance transparency and accountability in healthcare through e-health records, telemedicine, mobile health apps, and artificial intelligence.

He emphasised that digital health technology not only strengthens healthcare services but also boosts public trust in governance.

Political analyst and author Uday Mahurkar spoke on 'Good Governance to Election'—the historical perspective of Indian democracy, the quality of political conduct, administrative accountability, and the pro-people implementation of policies. He shed light on ways to strengthen local-level good governance, ensure transparency in elections, and establish ethical values in administration.
